

The 1st Packaging Company in Kilometro Rosso

Kilometro Rosso : an interdisciplinary and infrasectorial district of research and technology

Location in the Kilometro Rosso Park means being located in a prestigious environmental and architectural setting, fitted with state-of-the-art facilities and equipment, and operating in conjunction with all the most important industrial and research centers in one of Europe's most prosperous regions. It means living in an area that brings together the best talents in an international technical and scientific atmosphere, that favours the exchange of knowledge and expertise, thus creating a breeding ground for generating and promoting new ideas. The conditions in the Park will be such that each operating research center, company and laboratory will have the possibility to best develop all the synergies, affinities and relationships that best suit them, and will be able to exploit a wide range of high value-added communal services, both tangible and intangible.

These services will be made available, organized and offered by the management and development companies of the Park or by other delegated third parties based on the specific needs of the tenants, according to agreements that will be stipulated by the existing tenants of the Park.

Why Kilometro Rosso :

Weightpack strongly believe in technological information sharing with the others Kilometro Rosso's companies on the cutting edge of technology and R&D.
